

# GROWTH AND PERFORMANCE CHART

This Chart Is Used to Determine How Many "Balanced Nutritional Units" to Feed Per Day to Meet Your Horses' Recommended Allowance (R.A.). This Is Based On: Age, Growth Rate, Mature Size, Reproductive Status and/or Performance Level.

BNU = Balanced Nutritional Unit. All BNU's rounded to nearest .25, except those maturing to 220 lbs.  
 1 BNU = 1 lb. of appropriate Ration Balancer.  
 \*SUL = Safe Upper Limit.  
 Graph from NRC, 1989, nutrient requirements of horses, weight vs age, depending on potential mature body weight.
