

# NUTRENA BODY CONDITION SCORING (BCS) METHOD

Use this chart to aid in scoring BCS. Add up all scores and divide by 4 to get the total BCS.

Score	Crest of Neck	Behind the Shoulder (Heart girth Area)	Over the Ribs	Around the Tailhead
1	No fat cover can be felt. Bone structure easily noticeable.	No fat cover can be felt. Bone structure readily visible. Concave heart girth area.	No fat cover, skin on bone. Entire ribcage projecting prominently.	No fat cover. Individual vertebrae can be seen.
2	Very little to no fat cover; bone structure faintly discernible.	Very little fat cover at heart girth; less concave. Bone structure discernible.	Very little fat cover between ribs. Individual ribs prominent.	Tailhead bone prominent.
3	Slight fat cover. Neck accentuated and thin, but not bony.	Slight fat cover, fat starting to cover heart girth; no concavity.	Slight fat cover between ribs. Ribs still visually discernible.	Tailhead prominent but individual vertebrae cannot be seen.
4	Neck not obviously thin; does not blend into body smoothly.	Fat starting to be felt.	Fat starting to be deposited. Faint outline of ribs still visible.	Slight fat cover detected. Tailhead outline discernible.
5	Neck blends smoothly into body. No noticeable fat accumulation.	Behind shoulder blends smoothly into body.	Ribs not visible at standstill, but can be easily felt.	Fat can be felt/detected around tailhead. Tailhead blends smoothly.
6	Fat beginning to be deposited along the crest.	Spongy fat easily felt behind shoulder.	Fat starting to accumulate over ribs. Ribs not visible, but can be felt with pressure.	Fat on sides of tailhead beginning to feel spongy.
7	Spongy fat deposited along crest of neck.	Spongy fat pad visible with movement behind shoulder.	Noticeable fat filling between and over ribs. Ribs may still be felt with very firm pressure.	Fat on sides of tailhead slightly visible and spongy.
8	Noticeable thickening of sides of crest and entire neck.	Spongy fat pad visible with movement behind shoulder.	Ribs not detectable through fat cover.	Fat pads on sides of tailhead moderately bulging.
9	Bulging fat along entire neck; crest may start to break over.	Bulging, obvious fat pad behind shoulder.	Spongy fat visible along and over ribs.	Obvious bulging fat pads surrounding tailhead.
